This section models configuration changes and rollbacks. Changes are appended to the proposal log and processed asynchronously.

The set of all valid sets of changes to all targets and their paths.

The set of possible changes is computed from the *Target* model value.

$$\begin{aligned} \text{ValidChanges} &\triangleq \\ &\text{LET } \text{changeSets} \triangleq \{ s \in \text{SUBSET } \text{ValidPaths} : \\ &\quad \wedge \forall p \in \text{DOMAIN } \text{Target.values} : \\ &\quad \wedge \text{Cardinality}(\{ v \in s : v.\text{path} = p \}) \leq 1 \} \\ &\text{IN} \\ &\quad \{ c \in \{ \text{Paths}(s) : s \in \text{changeSets} \} : \text{DOMAIN } c \neq \{ \} \} \end{aligned}$$

Add change 'c' to the proposal log for target 't'

$$\begin{aligned} \text{RequestChange}(c) &\triangleq \\ &\text{LET } \text{index} \triangleq \text{Len}(\text{proposal}) + 1 \\ &\text{IN } \text{proposal}' = \text{proposal} @@@ \\ &\quad (\text{index} \rightarrow [\text{type} \mapsto \text{ProposalChange}, \end{aligned}$$

$$\begin{array}{ll}

change & \mapsto [index \mapsto index, \\
& \quad values \mapsto c], \\
rollback & \mapsto [index \mapsto 0], \\
phase & \mapsto ProposalInitialize, \\
state & \mapsto ProposalInProgress])
\end{array}$$

Add a rollback of proposal 'i' to the proposal log for target 't'

$$\begin{array}{l}
RequestRollback(i) \triangleq \\
\text{LET } index \triangleq Len(proposal) + 1 \\
\text{IN } proposal' = proposal @@ \\
\quad (index :> [type \mapsto ProposalRollback, \\
\quad \quad index \mapsto index, \\
\quad \quad change \mapsto [index \mapsto 0], \\
\quad \quad rollback \mapsto [index \mapsto i], \\
\quad \quad phase \mapsto ProposalInitialize, \\
\quad \quad state \mapsto ProposalInProgress])
\end{array}$$
